

Understanding Chemical Safety Signs and Labels

CNPC Chuanqing Drilling Engineering Company Limited (CCDC)

Fire Diamond

GHS Symbol

- This symbol means the product is flammable.
- It means that it catches fire easily and burns quickly.
- Keep products with this symbol away from heat, sparks, or open flames.

Risks

Can catch fire

Can burn the body

Can cause an explosion

GHS Symbol

- This means the product is an oxidizer.
- Oxidizers add oxygen to fire. This causes fire to burn faster and can start easily, sometimes even without sparks or open flame.
- Oxidizers can be dangerous if used or stored near heat, sparks, or open flame.

Risks

Can catch fire

Fire will grow
over time

GHS Symbol

- This symbol is used for gases under pressure.
- Can start a fire or cause an explosion.
- If pressurized gas is released, it can be dangerous to breathe or can freeze your skin. This is called frostbite.

Risks

Can cause an explosion

GHS Symbol

- This symbol means the product is corrosive.
- Corrosive substances can damage metal and cause their containers to leak or break.
- They are also dangerous if they get on your skin or in your eyes.
- If you inhale or swallow corrosive substances, it can burn your nose, throat, or stomach.

Risks

Can burn the body

Can damage the eyes

Can damage the
lungs

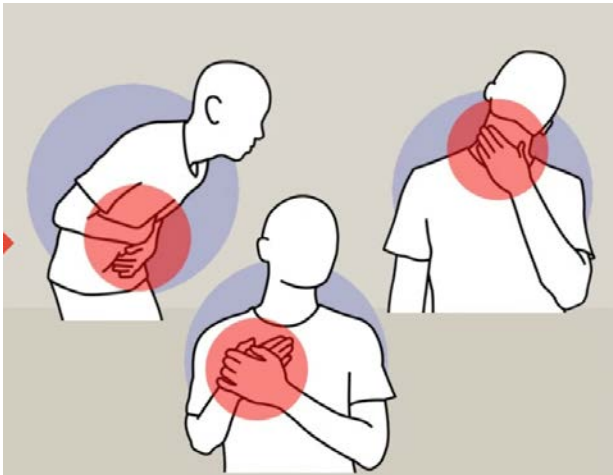

GHS Symbol

- The skull and crossbones symbol means the product has acute toxicity.
- These products can be extremely dangerous – even in small amounts or with brief exposure.
- If you swallow, inhale, or touch them, they can poison you or even kill you.

Risks

Can be fatal if eaten, inhaled, or touched

GHS Symbol

- Products with this symbol are harmful to health
- They can cause serious health problems that you may not notice right away.
- These products can cause asthma, cancer, and damage to your organs and lungs. This can also happen from long-term exposure to small amounts.

Risks

Long-term exposure to these chemicals can cause cancer or serious illness

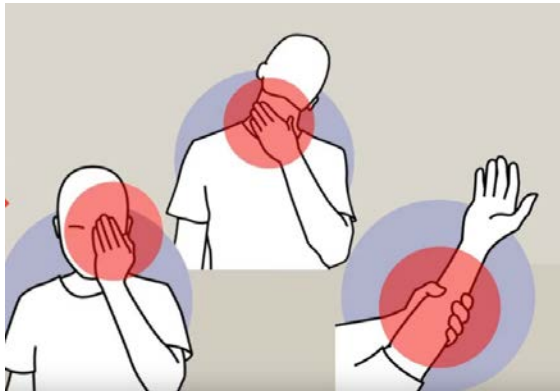

GHS Symbol

- The exclamation mark symbol is similar to the health hazard symbol, but is used for relatively less serious health effects.
- If you swallow, inhale, or touch these products, they can poison you. They can turn your skin red or cause irritation, and can also cause a burning sensation in your eyes or throat.
- Sometimes they can make you feel drowsy or dizzy.

Risks

- Can cause burning or a rash on the hands
- Can cause watering if it gets in the eyes

- Can cause mild dizziness or lightheadedness

GHS Symbol

- The exploding bomb symbol means the product is highly reactive or explosive.
- If not used or stored properly, it can catch fire or explode.
- These products should only be used with special training and supervision.

Risks

Can catch fire

Can burn the body

Can cause an explosion

GHS Symbol

- The environment symbol is used for products that can harm the environment.
- Products with this symbol should not be poured down the drain, as they can harm rivers and lakes.

Risks

Can kill fish

Contaminates the
water

Pollutes the
environment
